# **University of Pune**

Three Year B. Sc. Degree Course in MICROBIOLOGY

# Syllabus

(To be implemented from Academic Year 2013-14)

## **Preamble:**

Microbiology is a branch of science that studies "Life" taking an example of microorganisms such as bacteria, protozoa, algae, fungi, bacteria, viruses, etc. These studies integrate cytology, physiology, ecology, genetics and molecular biology, evolution, taxonomy and systematics with a focus on microorganisms; in particular bacteria. The relevance and applications of these microorganisms to the surrounding environment including human life and Mother Nature becomes part of this branch. Since inception of this branch of science, Microbiology has remained a field of actively research and ever expanding in all possible directions; broadly categorized as pure and applied science. Different branches of Pure Microbiology based on taxonomy are Bacteriology, Mycology, Protozoology and Parasitology, Phycology and Virology; with considerable overlap between these specific branches over each other and also with other disciplines of life sciences, like Biochemistry, Botany, Zoology, Cell Biology, Biotechnology, Nanotechnology, Bioinformatics, etc. Areas in the applied Microbial Sciences can be identified as: Medical, Pharmaceutical, Industrial (Fermentation, Pollution Control), Air, Water, Food and Dairy, Agriculture (Plant Pathology and Soil Microbiology), Veterinary, Environmental (Ecology, Geomicrobiology); and the technological aspects of these areas.

Knowledge of different aspects of Microbiology has become crucial and indispensable to everyone in the society. Study of microbes has become an integral part of education and human progress. Building a foundation and a sound knowledge-base of Microbiological principles among the future citizens of the country will lead to an educated, intellectual and scientifically advanced society. Microbiological tools have been extensively used to study different life processes and are cutting edge technologies. There is a continual demand for microbiologists in the work force – education, industry and research. Career opportunities for the graduate students are available in manufacturing industry and research institutes at technical level.

## **Introduction:**

The syllabi till today had been sufficient to cater for the needs of students for building up their careers in industry and research. However, with the changing scenario at local and global level, we feel that the syllabus orientation should be altered to keep pace with developments in the education sector. The need of the hour is proper syllabi that emphasize on teaching of technological as well as the administrative aspects of modern biology. Theory supplemented with extensive laboratory expertise will help these students, to avail these opportunities. Both these aspects i.e. theory and more of practical needs to stressed, such that a graduate student can start work directly in applied fields (industry or institutions), without any additional training.

Thus, the university / college itself will be developing the trained and skilled man-power. We even find a lack of trained teachers who can share their experiences on different aspects in microbiology. And we plan to restructure the syllabus in this viewpoint. The restructured syllabus will combine the principles of chemistry and biological sciences (molecular and cell biology, genetics, immunology and analytical tools) with technological disciplines to produce goods and services and for environmental management.

Microbiology curricula are operated at two levels viz. undergraduate and postgraduate. The undergraduate curricula are prepared to impart basic knowledge of the respective subject from all possible angles. In addition, students are to be trained to apply this knowledge particularly in day-to-day applications of Microbiology and to get a glimpse of research.

# Objectives to be achieved:

- To enrich students' knowledge and train them in the pure microbial sciences
- To introduce the concepts of application and research in Microbiology
- To inculcate sense of scientific responsibilities and social and environment awareness
- To help students build-up a progressive and successful career

# **Eligibility**

#### 1. First Year B.Sc.:

- a. Higher Secondary School Certificate (10+2) or its equivalent Examination with English and Biology; and two of the science subjects such as Physics, Chemistry, Mathematics, Geography, Geology, etc. OR
- b. Three Years Diploma in Pharmacy Course of Board of Technical Education conducted by Government of Maharashtra or its equivalent. OR
- c. Higher Secondary School Certificate (10+2) Examination with English and vocational subject of + 2 level (MCVC) Medical Lab. Technician (Subject Code = P1/P2/P3)

### 2. Second Year B.Sc.:

Keeping terms of First Year of B. Sc. with Microbiology as one of the subjects. In addition to the above qualification students who have passed the Diploma course in Pharmacy are eligible however such cases should be approved by equivalence committee of Faculty of Science of the University of Pune.

#### 3. Third Year B. Sc.:

Student shall clear all First Year B. Sc. Microbiology courses and satisfactorily keeping terms of Second Year of B. Sc. with Microbiology as one of the subjects.

Admissions will be given as per the selection procedure / policies adopted by the respective college keeping in accordance with conditions laid down by the University of Pune.

Reservation and relaxation will be as per the Government rules.

# **Standard of Passing**

 In order to pass in the first year theory examination, the candidate has to obtain 40 marks out of 100 in each course. (Minimum 32 marks must be obtained in the University Theory Examination.)

- ii. In order to pass in the Second Year and Third Year theory examination, the candidate has to obtain 20 marks out of 50 in each course of each semester. (Minimum 16 marks must be obtained in the University Theory Examination.)
- iii. In order to pass in practical examination, the candidate has to obtain 40 marks out of 100 in each course. (Minimum 32 marks must be obtained in the University Examination.)

#### **Award of Class**

The class will be awarded to the student on the aggregate marks obtained during the second and third year in the Principle subject only. The award of the class shall be as follows:

1	Aggregate 70% and above	First Class with Distinction
2	Aggregate 60% and more but less than 70%	First Class
3	Aggregate 55% and more but less than 60%	Higher Second Class
4	Aggregate 50% and more but less than 55%	Second Class
5	Aggregate 40% and more but less than 50%	Pass Class
6	Below 40%	Fail

#### **ATKT Rules**

While going from F. Y. B. Sc. to S. Y. B. Sc. at least 8 courses (out of total 12) should be cleared; however all F. Y. B. Sc. courses should be cleared while going to T. Y. B. Sc.

While going from S. Y. B. Sc. to T. Y. B. Sc., at least 12 courses (out of 20) should be cleared (Practical Course at S. Y. B. Sc. will be equivalent to 2 courses).

# **Equivalence of Previous Syllabus**

No equivalence required at F. Y. B. Sc. level, the course titles are same as previous syllabus.

## **External Students**

There shall be no external students.

# **University Terms**

Dates for commencement and conclusion for the first and second terms will be declared by the University authorities. Terms can be kept by only duly admitted students. The term shall be granted only on minimum 80 percent attendance at theory and practical course and satisfactory performance during the term.

## **Course Structure:**

**Duration:** The duration of B.Sc. (Microbiology) Degree Program shall be three years.

**Medium of Instruction:** The medium of instruction for the course shall be English.

To accommodate more advanced topics in the syllabi, it is necessary to understand the base science knowledge level of the students that have chosen the Microbiology discipline. Curricula of courses of state and central boards of higher secondary level were reviewed to avoid repetitions of introductory cell biology.

At **first year of under-graduation**, students will be given the basic information that includes – characteristics of microbial world. The microorganisms will be studied for morphological, structural characterization, isolations techniques from natural and extreme environments and their prominent features. The methodology for observation i.e. different microscopy techniques, staining techniques and nutritional requirements will be taught in detail; including these aspects at laboratory level as well. Introduction to biochemical characterization of components of microorganism e.g. proteins, lipids, nucleic acids and carbohydrates and instrumental techniques to estimate these components qualitatively and quantitatively from micro-organisms or other natural sources will be the focus for second theory paper. Relevant experimentation on these topics will be included in practical course. In practical course, students will be trained in preparing laboratory manuals, standard operating practices and log books.

At **second year under-graduation**, principles of taxonomy and classification of major groups of microorganisms can be studied in one of the papers. This paper will also include the physiological studies on these groups of micro-organisms. Second paper will deal with Air and Water Microbiology; role of micro-organisms in environment in regards to pollution and biodegradation; water and sewage treatment. Practical for the second year students will be less defined i.e. kept more flexible, designed to evolve project themes on environment, agriculture and pollution aspects and acquiring laboratory related skills. Practical at this level will also include application of biostatistics principles and computers for data analysis and interpretation, and introduction to scientific writing and report preparation. These aspects can be practiced better while carrying out the mini-projects.

At **third year under-graduation**, six theory papers deal with broad applied areas of microbiology that are interactive with higher living forms. Five such areas are – medical microbiology, microbial physiology, microbial (prokaryotic and eukaryotic) genetics, immunology and immunopathology, fermentation technology. The sixth course will be Applied Microbiology that will include – Dairy Microbiology, Food Microbiology, Fermentation Technology, Agriculture Biotechnology, Fungal Biotechnology, etc. The practical at third year will be planed more intensively, with exposure to applied fields.

# F. Y. B. Sc. Microbiology

Paper	Course Title	Marks	Lectures
Paper - I	Introduction to	100	Three Periods/Week per Paper
•	Microbiology		(Total 36/Paper
Paper - II	Basic Techniques	Basic Techniques   100   per Term)	,
Рарет - п	in Microbiology		per renny
Practical	Duratical Course	100	*Four Hours / Week
Course	Practical Course	100	(Total 96 – Term I & II)
*Practical to	be conducted as two	hours eac	h day on two consecutive days / Batch

#### **Examination Pattern**

Theory paper: University Examination – 80 marks (at the end 2<sup>nd</sup> term)

Internal Examination – 20 marks

Practical course: University Examination – 80 marks (at the end of 2<sup>nd</sup> term)

Internal Examination – 20 marks

**Theory examination** will be of three hours duration for each theory course. There shall be 5 questions each carrying equal marks. The pattern of question papers shall be:

Question 1 8 sub-questions, each of 2 marks; answerable in 2 -3 line and based on

entire syllabus

Question 2 and 3 4 out of 6– short answer type questions; answerable in 6 – 8 lines Question 4 2 out of 4 – long answer type questions; answerable in 12 - 16 lines Question 5 1 out of 2 –essay / long answer type question; answerable in 25 - 30

lines

**Internal examination**: Internal assessment of the student by respective teacher will be comprehensive and continuous, based on written test, 10 marks each term. The written test shall comprise of objective type questions – Multiple Types Questions, True / False, Definitions, Tricky computational problems with minimum calculations. There shall be 20 questions, each question of 0.5 marks.

**Practical Examination:** Practical examination shall be conducted by the respective college at the end of the academic year. Practical examination will be of minimum 4 hours duration, carried over on two subsequent days. There shall be 10 marks for laboratory log book and journal, 10 marks for viva-voce and minimum three experiments. Certified journal is compulsory to appear for practical examination. There shall be two experts and two examiners per batch for the practical examination.

**Setting question papers:** Questions should be designed to test the conceptual knowledge and understanding of the basic concepts of the subject.

## S. Y. B. Sc. Microbiology

	Paper	Course Title	Marks	Lectures
Semester	MB - 211	Bacterial Systematics and Physiology	50	Four Periods/Week
I	MB - 212	Microbial Genetics	50	per Paper
Semester	MB – 221	Analytical Microbiology	50	(Total 48/Paper
II	MB - 222	Air and Water Microbiology	50	per Semester)
Semester I & II	Practical Course	Practical Course	100	*Four Hours / Week (Total 96 – Semester I & II)
*Pra	actical to be cor	nducted as two hours each day on two	consecutiv	e days / Batch

#### Tractical to be conducted as two hours each day on two consecutive days, but

#### **Examination Pattern**

Theory paper: University Examination – 40 marks (at the end of each semester)

Internal Examination – 10 marks

Practical course: University Examination – 80 marks (at the end of 2<sup>nd</sup> semester)

Internal Examination – 20 marks

**Theory examination** will be of two hours duration for each theory course. There shall be 4 questions each carrying equal marks. The pattern of question papers shall be:

Question 1 10 sub-questions, each of 1 marks; objective type and based on entire

syllabus

Question 2 and 3 2 out of 3 sub-questions, each of 5 marks; short answer type questions;

answerable in 10 – 15 lines

Question 4 1 out of 2 – long answer type questions; answerable in 20 – 25 lines

**Internal examination**: Internal assessment of the student by respective teacher will be comprehensive and continuous, based on written test, 10 marks each semester. The written test shall comprise of objective type questions — Multiple Types Questions, True / False, Definitions, Tricky computational problems with minimum calculations. Different sets of question papers may be given in the same class-room. There shall be 20 questions to be answered in 40 minutes, each question of 1mark.

**Practical Examination:** Practical examination will be of minimum 4 hours duration, carried over on two subsequent days. There shall be 10 marks for laboratory log book and journal, 10 marks for viva-voce and minimum three experiments. Certified journal is compulsory for appearing for practical examination. There shall be two experts and two examiners per batch for the practical examination. One of the examiners will be external.

**Setting question papers:** Questions should be designed to test the conceptual knowledge and understanding of the basic concepts of the subject.

# Paper I: Term II

Sr.	Topic	Lectures
No.		
5.	<ol> <li>Covalent and non-covalent bonding in biomolecules</li> </ol>	4
	II. Concepts of pH and redox potential	
	Chemistry of Biomolecules	16
	<ul> <li>Carbohydrates (Starch, Glycogen, Cellulose, Peptidoglycan)</li> </ul>	
	<ul> <li>Lipids (Triglycerides and phospholipids)</li> </ul>	
	<ul> <li>Structural and Functional Proteins (Hemoglobin, Immunoglobulin;</li> </ul>	
	flagellin and cytoskeletal proteins in bacterial cell)	
	Nucleic acids ( DNA and RNA)	
6.	Bacterial Cytology	16
	Studies on structure, chemical composition and functions of the following	
	components in bacterial cell:	
	Cell wall	
	Cell membrane	
	• Endospore	
	• Capsule	
	Flagella	
	Fimbriae and Pili	
	<ul> <li>Ribosomes</li> </ul>	
	Chromosomal & extra-chromosomal material	
	Cell inclusions ( Gas vesicles, carboxysomes, PHB granules, metachromatic	
	granules and glycogen bodies)	

# THEORY PAPER II: BASIC TECHNIQUES IN MICROBIOLOGY

# Paper II: Term I

Sr. No.		Торіс	Lectures
1.	a. b.	<ul> <li>Units of measurement. Modern SI units (Length, volume, Weight)</li> <li>Microscopy:         <ul> <li>Bright field microscopy: Structure, working of and ray diagram of a compound light microscope; Concepts of magnification, numerical aperture and resolving power.</li> </ul> </li> <li>Types, ray diagram and functions of – condensers, eye-pieces and objectives</li> <li>Aberrations in lenses - spherical, chromatic, comma and astigmatism</li> <li>Principles, construction, working and applications of:         <ul> <li>Dark field microscopy</li> </ul> </li> </ul>	12
		<ul><li>ii. Fluorescence microscopy</li><li>Confocal microscopy</li></ul>	

2.	Stainin	g Techniques :	8
	•	Definitions of Stain; Types of stains (Basic and Acidic),	
	•	Properties and role of Fixatives, Mordants, Decolorisers and Accentuators	
	•	Principles of staining techniques for following:	
		i. Monochrome staining and Negative (Relief) staining	
		ii. Differential staining - Gram staining and Acid fast staining	
3.	Steriliz	ation and Disinfection	
	1.	Physical Agents - Heat, Radiation, Filtration	6
	2.	Chemical agents and their mode of action - Aldehydes, Halogens,	10
		Quaternary ammonium compounds, Phenol and phenolic compounds,	
		Heavy metals, Alcohol, Dyes, Detergents and Ethylene oxide.	
	3.	Characteristics of an ideal disinfectant	
	4.	Checking of Efficiency of Sterilization — Biological and Chemical Indicators	
	5.	5. Checking of Efficiency of Disinfection - Phenol Coefficient	

# Paper II: Term II

Sr.	Topic	Lectures
No.		
4.	Cultivation of Microorganisms	
	Nutritional requirements and nutritional classification	3
	<ol><li>Design and preparation of media – Common ingredients of media and types of media</li></ol>	3
	<ol> <li>Methods for cultivating photosynthetic, extremophilic and chemolithotrophic bacteria.</li> </ol>	4
	<ol> <li>Concept of Pure Culture, Enrichment, Isolation and Preservation techniques. Maintenance of bacterial and fungal cultures</li> </ol>	6
	5. Culture collection centers and their role. Requirements and guidelines of	2
	National Biodiversity Board for Culture collection centers	
5.	Bacterial Growth	
	Growth Kinetics and growth curve; definitions of Generation time, Growth rate	4
	and specific growth rate	
	Methods of enumeration:	6
	Microscopic methods (Direct Microscopic Count, Counting cells using	
	Neubauer, Petroff and Hausser's chambers)	
	2. Plate counts (Total Viable Count)	
	3. Estimation of Biomass (Dry mass, Cell volume)	
	4. Chemical methods (Cell Carbon and Nitrogen estimation)	
	5. Turbidometric methods (Nephalometry)	
	Factors affecting bacterial growth (pH, Temperature, Solute Concentration (Salt	4
	and Sugar) and Heavy metals	
	Diauxic growth	1
	Synchronous culture	3

# FYBSc Practical Course (Term I & II)

BASED	On Theory Paper I & II	(96)
Expt. No.	Topic	Hours
1-2	Preparation of Standard Operating Procedures (SOPs) for common microbiology	2
	laboratory instruments e.g. Incubator, Hot Air Oven, Autoclave, Colorimeter, pH	
	Meter, Distillation Unit, Chemical Balance, Laminar air flow hood, Clinical	
	Centrifuge	
3	Construction (mechanical and optical), working and care of bright field	1
4	microscope  Observation of microorganisms using bright field microscope - Bacteria,	1
4		1
5-7	Protozoa, Molds and Yeasts, Algae – from natural habitat	3
5-7	Observation of microorganisms using staining techniques:	3
	a. Monochrome staining and	
	b. Negative /Relief staining (Capsule staining)	
0.0	c. Gram staining of bacteria	3
8-9	Observation of motility in bacteria using:	2
	a. Hanging drop method and Cragie's tube method	
10	b. Swarming growth methods	4
10	Enumeration of yeast cells using a counting chamber	1
11-12	Cultivation of microorganisms:	2
	a. Preparation of simple laboratory nutrient media (solid and liquid) and	
	using them to cultivate bacteria.	
	b. Observation of the growth of cultures and reporting of colony and cultural	
	characteristics (Nutrient and MacConkey's agar)	_
13	Isolation of bacteria by streak plate technique	1
14-15	Enumeration of bacteria from fermented food / soil / water by:	2
	a. Spread plate method	
	b. Pour plate method	
16	Aseptic transfer techniques (slant to slant, broth to broth, broth to agar and Agar	1
	to Agar)	
17	Preservation of cultures on slants, soil and on grain surfaces; revival of these	1
	cultures and lyophilized cultures.	
18	Checking sterilization efficiency of autoclave using a biological indicator (B.	1
	stearothermophilus)	
19	Demonstration of checking of efficacy of chemical disinfectant: Phenol Coefficient	1
	Rideal Walker method)	
20	Preparation of Winogradsky column and observation of different types of	1
	microorganisms using bright filed microscope.	
21-22	Study of normal flora of skin:	2
	a. Cultivating and observing different morphoforms of bacteria from skin	
	b. Study of effect of washing skin with soap and disinfectant on it's	
	microflora	
23-24	a. To study the effect of different parameters on growth of <i>E. coli</i> : pH,	2
	temperature, sodium chloride concentration	
	b. Study of Oligodynamic action of heavy metal
